

Equipment Tracker

FireStream **Asset Management Module**

**Increase Return
On Investment
And Decrease
Operation
Costs With
Equipment
Tracker.**

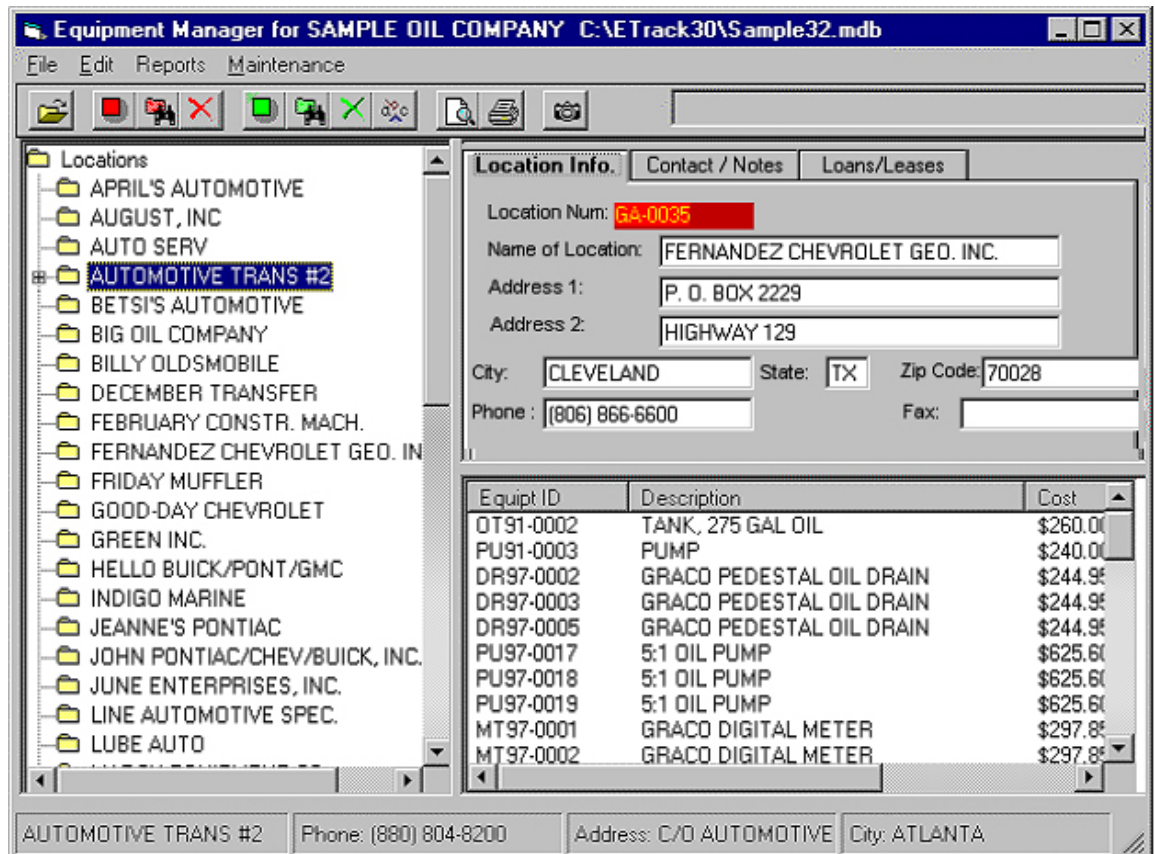

Money is lost everyday by petroleum marketers who lack an efficient system for managing and tracking their equipment assets. Storage tanks, lubricant pumps, hose reels—the average marketer has thousands of pieces of equipment with no system for managing them.

- Are you tired of losing money when equipment disappears?
- Have you ever “lost” loaned equipment when a customer sells their property?
- Have you paid for costly repairs that should have been covered under warranty?

- Have you missed critical equipment maintenance schedules?
- Do you wonder if your customers are meeting volume commitments on loaned equipment?
- Are you searching for a way to track equipment for property taxes?

If your answer to any of these questions is YES, then FireStream’s Equipment Tracker may be the software solution you need to increase your asset control.

Equipment Tracker is an easy-to-use asset management system that helps mar-

marketers increase return on investments while decreasing operation costs.

Equipment Tracker keeps track of loaned and leased equipment and maintenance schedules, generates agreements, and depreciates assets. A tickler system alerts you to critical tasks, such as when an agreement or warranty is due to expire.

Equipment Tracker Manages:

- Movement of all equipment—petroleum, propane, c-store and more.
- Equipment by type—tanks, pumps, nozzles, etc.
- Inter-company equipment transfers.

Equipment Tracker Shows:

- Vendor and invoice information for all purchases.
- The tax region/county where equipment physically resides.
- Detailed equipment listings per site.
- Location and maintenance history.

Equipment Tracker Generates:

- Loan requisitions.
- Customizable loan and lease agreements.
- Maintenance schedules by date and staff responsible.
- A detailed “Return on Investment” worksheet per loan or lease.
- Equipment status reports by site, part number and other options.

Equipment Tracker Offers:

- Easy search options for any piece of equipment, site or loan.
- Easily obtained downloads/updates online.
- Data may be kept in one location with input/output from multiple branches.
